

So What Are The Alternatives?

- Inflation doesn't have to exist.
- The falling value of the dollar doesn't have to continue.
- We The People should be free to use whatever money we choose.

Perhaps a solution can be found in Article I Section 10 of the United States Constitution, "[No State] shall make any Thing but gold and silver Coin a Tender in Payment of Debts."

Article 1, Section 8 of the US Constitution specifically says that **Congress is the only body that may "coin money and regulate the value thereof."** The US Constitution has never been amended to allow anyone other than Congress to coin and regulate currency.

If "We the People" don't take some action now, there may come a time when "We the People" are no more. When financial freedom, a cornerstone of individual liberty, is eroded, the American people become like slaves. They become shackled by the oppression of overpricing, overwork, over-taxation, and the loss of ownership and of savings. You should write a letter or send an email to each of your elected representatives. Many of them do not understand the FED, once informed they will not be able to plead ignorance and remain silent.

"If the American people, ever allow private banks to control the issuance of their currencies, first by inflation and then by deflation, the banks and corporations that will grow up around them will deprive the people of all their prosperity until their children will wake up homeless on the continent their fathers conquered." – Thomas Jefferson

!!Rally Sat. April 25th!!
All day Rally at the FRB Cash Processing Center located at 1550 N. 47th Avenue in Phoenix on Saturday. Speakers at 11:00 a.m.

So What is the Federal Reserve?

The first thing that the Federal Reserve is **NOT** is a part of our government. The FED is our central bank. It is a PRIVATE CORPORATION, which is owned by other corporate banks. As our central bank the FED is supposed to implement sound fiscal policies for our country. They are supposed to monitor commercial banks to ensure that they maintain sufficient assets, like cash, that they may remain solvent and stable. They also do business, such as currency exchanges and gold transactions with other central banks.

Unfortunately, our FED operates not in the interest of the public good but for profit. At its heart, the United States Federal Reserve is a banking Cartel, designed to keep a monopoly on our money. It profits through persistent inflationary policies that transfer wealth from the savings of the middle and lower class to the wealthy and politically connected. In order to grasp the scope of the fraud and theft being perpetrated by our current Central bank, you must understand the insidious practice known as "Fractional Reserve Banking."

What is Fractional Reserve Banking?

Fractional banking or fractional lending is the ability to create money from nothing, lend it to the government or someone else and charge interest to boot.

When did this start?

The practice evolved before banks existed. Goldsmiths rented out space in their vaults to individuals and merchants for storage of their gold or silver. The goldsmiths gave these "depositors" a certificate that showed the amount of gold stored. These certificates were then used to conduct business.

In time the goldsmiths noticed that the gold in their vaults was rarely withdrawn. Small amounts would move in and out but the large majority never moved. Sensing a profit opportunity, the goldsmiths issued double receipts for the gold, in effect creating money (certificates) from nothing and then lending those certificates (creating debt) to depositors and charging them interest as well.

Since the certificates represented more gold than actually existed, the certificates were "fractionally" backed by gold. Eventually some of these vault operations were transformed into banks and thus the practice of fractional banking continued.

Has the U.S. had other Central Banks?

There have been three central banks in our nation's history. The first two were abolished by the will of the American people. President Andrew Jackson won the presidency in 1828 with the promise to end the national debt and eliminate the Second Bank of the U.S. (SBUS). During his second term President Jackson withdrew all government funds from the bank and on January 8, 1835, paid off the national debt. He is the only president in history to have this distinction. The charter of the SBUS expired in 1836.

During the subsequent years, without a central bank to manipulate the supply of money, the US experienced unprecedented growth. The resulting widespread wealth was too much for the central bankers of the world; they had to get back in the game.

In 1910 at the behest of a large conglomerate of financial titans including members of J.P. Morgan's empire, European Central Banks, and Senator Nelson Aldrich, a plan was devised to pressure and deceive congress into enacting legislation that would covertly establish a private central bank. This happened in 1913 with the Federal Reserve Act and since its passage the value of the dollar has plummeted 98%.
